

Fertiliser by-pass unit PVC-U 2" male thread type single tank (delivered unassembled)

(7026640)

TECHNICAL SPECIFICATIONS

Material	PVC-U
Connection	male thread
Type	single tank (delivered unassembled)
Size	2"

PRODUCT INFORMATION

The PVC-U fertiliser by-pass unit completes the plastic fertiliser tank or dosing unit that should be connected to the 2 x 13mm hose tails.

A double set of ball valves allows the dosing of 2 different fertiliser mixes.

The correct proportion of fertiliser can be set by partially closing the gate valve, reducing the pressure.

The flow of fertiliser can be interrupted by closing the ball valves or by fully opening the gate valve.

The unit is delivered unassembled with an additional 0.25ltr of PVC glue and roll of Teflon tape.
